Turn scattered requests into structured, secure workflows—automated, compliant, and ready to scale across your teams. Reduce manual effort, improve data accuracy, and bring clarity to every step of your work intake.

## BUSINESS OUTCOMES THAT MATTER

- **Incomplete Jira tickets?** → Capture structured, complete data with required fields, validation rules, and conditional logic.
- **Workflow delays and handoff gaps?** → Automate issue creation and status transitions as soon as a form is submitted – no manual steps.
- **Collaboration gaps with non-Jira users?** → Share secure forms via link, email, Confluence, or website – no Jira license or login required.
- **Overwhelmed with admin requests?** → Empower teams with self-service forms and public links – without needing to add new agents.
- **Inconsistent intake from multiple sources?** → Centralize and standardize requests from Slack, inboxes, QR codes, and embedded forms – into Jira.
- **Lack of process visibility or accountability?** → Track responses, attach multiple forms to issues, and preserve a full audit trail inside Jira.

## USE CASES FOR TEAMS

### Product Teams

Turn ideas, beta feedback, and prioritization votes into Jira Product Discovery ideas – with mapped fields and desired structure.

### Legal & Finance

Standardize policy reviews, contract intake, or approval flows – with audit trails tied to the issue.

### HR & Ops

Onboarding, equipment requests, employee feedback placed like Confluence embeds or your website combined with Jira automation.

### Marketing & Sales

Collect creative briefs, campaign requests, or budget asks with validations and clear context.

### Support and customer success

Simplify intake, collect meaningful feedback, and automate ticket creation in Jira or JSM – all without needing external users to log in.

### IT & Engineering

Use one form to intake requests, another to approve changes, and a third to collect CSAT feedback – all tied to the same issue.

## WHY PARTNER WITH US

A repeatable, high-demand solution to expand Jira across departments.

**No extra agent costs:** Collect input from unlicensed users – without needing JSM licenses.

**Work anywhere in Jira:** Compatible with Jira Software, Work Management, Product Discovery, and JSM.

**Built for smart workflows:** Create, update, assign, and transition – all from a form.

A tool that meets enterprise buyers' demands for compliance (SOC2), scale, and ease of adoption.

A roadmap built on Atlassian Forge, ensuring security, performance, and alignment with platform evolution.
